

Cadaveric Ultrasound Guided MSK Injection Course

April 19th and 20th 2022
Queen Mary University of London
Anatomy Laboratory

This comprehensive and highly practical 2-day course takes place in the impressive facilities at Queen Mary University of London's cadaver laboratory and is the essential course for anyone looking to begin ultrasound guided procedures, for clinicians looking to expand their repertoire of injections

The course provides students with the opportunity to,

- Study real anatomy and the relationship of anatomical structures relevant to musculoskeletal injections in a variety of prosections.
- Practice injection techniques and scanning on cadavers.

The course is split into an upper and lower limb day. The practical workshops are carried out on soft-preserved full body cadavers, which is a very close match to the real thing. You have full access to perfect your skills on the cadavers over the 2 days. We have lots of machines and you will benefit from close supervision throughout from the faculty. The course is taught by experienced practitioners who will deliver the information you need and translate this information into the practical application of carrying out the guided injections.

Who should attend?

This course is suitable for MSK Radiologists, GPs with special interest in MSK/Sports Medicine, Surgeons, Sports Medicine Consultants, Physiotherapists, Radiographers, Podiatrists, Sonographers and Osteopaths.

Course pre-requisites

The course is designed for delegates who are either just starting out with ultrasound guided procedures or want to develop their skills.

Fees

£750
